

## LiftMaster Offers Three CAME Gate Operators

In August, LiftMaster announced it had joined forces with Italy-based CAME Cancelli, an access automation leader in Europe, to unveil a new line of residential gate operators. Under the agreement, LiftMaster will exclusively market in North America three 24V DC CAME-branded operators with LiftMaster's Security+ 2.0 technology.

**The BX-243** slide gate operator supports gates weighing up to 660 lbs. and measuring up to 25' in length for residential applications. It includes a timer-to-close and is available in chain drive or with a rack and pinion transmission.

**The Frog** underground swing gate operator mounts flush with the pavement and supports gates weighing up to 1,170 lbs. or measuring up to 11.5' in length. It includes a timer-to-close and is equipped with a watertight motor and a maintenance-free direct gear drive system.

Ferni

**The Ferni** residential swing gate operator, coming out in fall 2012, includes a compact articulated arm that mounts neatly on a column. The Ferni includes a timer-to-close and can be mounted on the top, middle, or bottom of a gate and supports gates weighing up to 1,770 lbs. or measuring up to 13' in length. ## Clopay Commercial Introduces Specialty Doors

In July, Clopay introduced custom four-fold doors, hangar doors, crane doors, fire doors, and swing doors. Each door is designed to meet specific opening size and operating specifications and is available with manual and power operation.

Lite/four-fold doors are built for two-way traffic openings, offering low maintenance and high cycles. Opening at a rate of 2'/sec., the panels fold completely clear of the opening, allowing full access.

Hangar doors are available in tip-up, bi-fold, and various sliding panel designs. They are fabricated in factory modular assemblies with all components attached for easy installation.

The tip-up door is a single-piece upward-acting door that withstands high wind loads while providing a weathertight seal.

The new fire doors come in single-slide, bi-parting, and tele-slide multi-panel configurations. The doors can be UL- and FM-labeled for up to four hours with a 250-degree-in-30-min. temperature rise rating.

## Linear Releases Battery Backup Unit

In July, Linear announced the availability of its new Battery Backup Unit (BBU), an easy-to-mount accessory for the LDCO800 DC-powered garage door operator. The BBU mounts in the LDCO800 enclosure and can provide power for up to 24 hours.

LDCO800 openers now include an updated control board that is ready for plug-and-play installation of the BBU. The control board can be retrofitted to all previous generations of the LDCO800. [www.linearcorp.com](http://www.linearcorp.com) ■

## Garaga Adds Polycarbonate Door

In August, Garaga unveiled its latest commercial garage door, the G-4400 Polycarbonate.

The 1-3/4"-thick door is ideal for car wash and auto repair applications that need impact resistance and sunlight. The door's Lexan polycarbonate window panels can transmit more than 70 percent of light while resisting extreme brightness and heat.

The Lexan panels are available in clear or bronze, and the aluminum extrusions come in black, white, or clear anodized. Panel ends are doubled to 6-1/4" for extra strength, and available door widths range from 8' to 24'.

## Overhead Door Adds GDO Accessories

In May, Overhead Door introduced two new garage door opener accessories: the Advanced Wall Console and the Master Remote.

The Advanced Wall Console can operate up to three openers via an Overhead Door Network Adapter (sold separately) that plugs into the Odyssey and Destiny openers. The unit controls lighting and monitors the performance of the garage door and opener. Overhead Door distributors can program their own contact information into the console.

The Master Remote is a three-button remote that is compatible with Overhead Door openers manufactured since 1993 and all Overhead Door gated-community receivers and 912 units. The remote can open up to three garage doors and is also CodeDodger 1 and CodeDodger 2 compatible. [www.overheaddoor.com](http://www.overheaddoor.com) ■

## Wayne-Dalton Offers Fire Door First

In May, Wayne-Dalton announced the expansion of its FireStar 700 and 700C series to include lift-up and crank operations. By combining floor resettable and non-tension release features with these additional operations, Wayne-Dalton becomes the first in the industry to provide a fire door with these capabilities.

The feature provides dealers with an NFPA 80-compliant fire-containment product that covers all the different modes of operation required by end users. With no reapplication of tension necessary after a drop test, FireStar 700 and 700C series doors are easy to install. <http://Commercial.Wayne-Dalton.com> ■

## C.H.I. Adds New Rolling Door

In July, C.H.I. announced its new superimposed rolling steel door that is actually two doors sharing a single pair of head plates and wall angles. The door is designed for applications that require maximum security and an environmental barrier some of the time and need airflow and security at other times.

Some typical superimposed doors consist of a service door and grille or an insulated door and a service door with a perforated curtain, which allows airflow and provides an insect barrier. Such designs are used in commercial, industrial, defense, and food service applications. [www.chiohd.com](http://www.chiohd.com) ■

## Clopay Adds Ultra-Grain to Canyon Ridge

In July, Clopay announced the Canyon Ridge Collection Ultra-Grain Series.

"We've taken aspects of two successful Clopay garage door lines and merged them into one door that delivers the best of both worlds," says Pat Lohse, vice president of residential marketing.

The door features a 2" polyurethane-insulated steel base door (18.4 R-value) finished with the Ultra-Grain simulated stained wood paint finish. Composite overlays molded from actual pieces of clear cypress wood are attached to the surface of the door to create the carriage house designs.

The new series is available in 14 panel designs in two finish colors: walnut and medium.

## Miller Edge Announces Wireless Edge Sensor

In July, Miller Edge announced that its MEL (Monitored Edge Link) successfully completed testing to become a UL 325 Recognized Component. The wireless MEL transmitter/receiver eliminates the need to hard-wire a monitored edge sensor to the door operator.

MEL meets the requirements of UL 325 by continuously checking for the presence and connection of a monitored external sensing edge. When MEL is attached to currently UL-listed commercial door operators, a loss of signal transmission or fault in the system will cause the operator to revert to constant pressure to close.

This new product allows any monitored edge sensor to work with any operator brand, with no additional module required. MEL is “backward compatible” and will function with gate operators and UL 325 commercial operators manufactured before Aug. 29, 2010. [www.milleredge.com](http://www.milleredge.com) ■

## Hörmann Flexon Introduces Speed-Master 1600 L Eco

Hörmann Flexon recently introduced the Speed-Master 1600 L Eco, a high-speed roll-up door that is modeled after the Speed-Master 1600 L, but with more basic features and economical pricing for interior and exterior door openings up to 12' x 12'.

The door offers 58-oz. panel material and an optional UPS emergency battery pack. [www.hormann-flexon.com](http://www.hormann-flexon.com) ■

## Tandem Announces New Line of Garage Doors

In August, Tandem Building Products, a new company, announced its 2in1 line of garage doors, an individual walk door mounted in a residential garage door.

The 2in1 offers a low-profile ADA-compliant threshold, reducing the tripping hazard found in other doors.

## Rotary Offers Soft-Sided Truck Shelters

In July, Rotary Products added Soft-Sided Truck Shelters to its product line. The shelter uses high-density foam covered with vinyl in place of rigid wood side frames, eliminating the need for the steel protective bumpers.

In the event of a trailer mis-spot, the flexible sides will return with no damage. The side curtains are attached with a touch-and-hold system that allows removal and replacement without tools.

## Rotary Adds Dock Guide Lights

In July, Rotary Products announced it is now supplying Dock Guide Lights. The lights improve safety and reduce damage by enhancing a driver's depth perception when backing into a dock.

The lights provide a focal point for drivers and reduce the risk of “overrunning” a dock. [www.rotaryproductsinc.com](http://www.rotaryproductsinc.com) ■

## GDI Adds Ultra-Low Headroom Operator

In August, Gates and Doors Inc. (GDI) introduced its new JDMG operator for trolley and jackshaft applications. Each JDMG comes with two different mounts, one for trolley and one for jackshaft applications. The trolley mount requires 4-3/4" of headroom.

This operator can operate any balanced door up to 1,500 lbs., whether standard, low-headroom, high lift, or vertical lift. It offers multiple voltage capability, from 115 VAC to 575VAC, 50/60Hz, in single- and three-phase systems.

The JDMG is rated for 3,200 cycles/day at speeds ranging from 7"/sec. to 20"/sec. The standard unit is for NEMA1 environments and can also be ordered for NEMA4 environments.

The built-in 40-Day DoorLocator tracks and remembers door positions, even if the unit is without AC power for up to 40 days. The operator features soft-start and soft-stop operation, optional battery backup, and emergency chain hoist. [www.gatesanddoorsinc.com](http://www.gatesanddoorsinc.com) ■

more  
reliability

More reliability means more than delivering a quality product. It's online applications that put control back in the hands of the customer and confidence that comes with getting the right product when you expect it. More reliability means four strategically located production facilities throughout the country that offer the same flexibility, quality and service—every time, everywhere. ## Operator Cradle Developed

In September, R&L Garage Door planned to release its Electric Operator Cradle (patent pending) for operator installations.

The cradle attaches to the installer's stepladder and holds the operator at the desired height. It is adjustable and can be used for 7' and 8' operator installations. The product was developed by R&L's owner, Robert Davenport of East Stroudsburg, Pa.
