Garage Door Labels

The members of DASMA’s Commercial & Residential Garage Door Division agreed there was a need to create an exemplar set of labels to be affixed to garage door products. The labels provide users of these products with helpful safety information. Three “safety” labels were created, using the guidelines of the ANSI-Z535 series of standards regarding the content and format of product safety labels. It is important to recognize that, in accordance with the ANSI-Z535 standards, the word "warning", or the equivalent symbol, on an orange background indicates that serious injury or death could occur from the hazard stated on the label.

ANSI-Z535.4 provides guidelines for maintenance or replacement of safety labels, as follows:

- **Maintenance:** Product safety labels should be periodically inspected and cleaned by the product user as necessary to maintain good legibility for safe viewing distance.
- **Replacement:** The product user should replace product safety labels no longer meeting the legibility requirements for safe viewing distance. The product user should contact the product manufacturer to determine a means for obtaining replacement labels for their particular door.

Since door product labels are often printed in multiple languages, both written text and pictorial labels are acceptable. Pictorial labels without language-specific text should be supported with more detailed written text on a web site or product manual. Pictorial labels should also be easily understood by consumers who are non-experts in garage doors. See an example in Figure 2.

Descriptions of labels created by DASMA are as follows:

- **CRGD-100, Garage Door Safety Instructions Safety Label**
  This label warns of hazards associated with a garage door. A list of instructions is also given pertaining to safe operation of a garage door. This label should be placed at a readable height on the door. (See Figure 1)

- **CRGD-101, Garage Door Bottom Bracket Safety Label**
  This label warns that a garage door bottom bracket is under extreme spring tension. This label should be placed adjacent to a garage door bottom bracket. (See Figure 2)

- **CRGD-102, Garage Door Springs Safety Tag**
  This two-sided tag warns that garage door springs are under extreme tension. This tag should be affixed directly to a garage door spring assembly, without interfering with spring function. (See Figure 3)

---

WARNING

THE ADJACENT BOTTOM DOOR BRACKET IS UNDER EXTREME TENSION AND CAN CAUSE SERIOUS INJURY OR DEATH.

DO NOT adjust, repair or remove bottom door brackets or any parts to which cables and/or springs are connected. These parts are under extreme tension and can cause serious injury or death.

Adjustments or repairs must ONLY be made by a trained door systems technician using proper tools and instructions.

DO NOT remove, cover or paint over this label. Product user should inspect this label periodically for legibility and should order a replacement label from the door manufacturer, as needed.

This Technical Data Sheet was prepared by the members of DASMA's Commercial & Residential Garage Door Division Technical Committee. DASMA is a trade association comprising manufacturers of rolling doors, fire doors, grilles, counter shutters, shear doors, and related products; upward-acting residential and commercial garage doors; operating devices for garage doors and gates; sensing devices; and electronic remote controls for garage doors and gate operators; as well as companies that manufacture or supply either raw materials or significant components used in the manufacture and installation of the Active Members' products.
WARNING
HIGH SPRING TENSION CAN CAUSE SERIOUS INJURY OR DEATH.

DO NOT adjust, repair or remove springs or parts to which springs are connected, such as steel brackets, cables, wood blocks, red colored fasteners or other parts of the counterbalance system.

Adjustments or repairs must ONLY be made by a trained door systems technician using proper tools and instructions.

DO NOT remove, cover or paint over this tag. Product user should inspect this tag periodically for legibility and should order a replacement tag from the door manufacturer, as needed.

Guidelines for Door Safety Labels

Construction: Polypropylene Over-Laminate
Semi-Gloss Paper Face-Stock
Permanent Adhesive
40# liner

Over-laminate: A tough, clear bi-axially oriented polypropylene film designed for high strength and good resistance to environmental factors.

Adhesive: A permanent adhesive designed for high initial tack and ultimate bond strength to a wide range of substrates including glass, painted metal, painted wood, and low surface energy plastics.

Minimum Application Temperature +25ºF
Service Temperature Range -65ºF to +160ºF

Liner: A 40# (2.5 mil) super-calendered kraft liner featuring high internal strength, toughness, and tear resistance. Has excellent die cutting and stripping properties for use in sheeted and roll-to-roll applications.

Storage: Ideal storage conditions are 72ºF with 50% RH. Extremes of temperature and humidity should be avoided.
Guidelines for Door Safety Tags

Construction: 13-point White Tag Stock, Non-Pressure Sensitive
Printed Two-Sided
¼” Hole Punch, ¼” Grommet
26-12 Wire Attachment

Color: Printed 151 of Safety Orange and Black.

Adhesive: None

Storage: Ideal storage conditions are 72°F with 50% RH.
Extremes of temperature and humidity should be avoided.

Note: Technical Data Sheets are information tools only and should not be used as substitutes for instructions from individual manufacturers. Always consult with individual manufacturers for specific recommendations for their products and check the applicable local regulations.
