

LiftMaster introduces Smart Video Intercom solution

In June, LiftMaster introduced its Smart Video Intercom-M Access System (CAPXM) designed for apartment building and multifamily communities. The new intercom includes myQ technology, allows property managers and residents to open doors and manage guest access remotely, and offers the ability to see and talk to visitors through a live video feed.

Additional features include a 7" fade resistant, high-definition color touch display with a built-in wide-angle camera and customizable applications that help streamline the management of access points.

The intercom will soon feature the option to link to a myQ Community property management system for automatic tenant directory updates through partnerships with leading Property Management Systems, including RealPage. www.liftmaster.com ■

Alpine Overhead Doors launches E-Series line

In July, Alpine Overhead Doors introduced its E-Series line of rolling doors and grilles. The new doors provide a cost-efficient alternative to Alpine's most popular models. The E-Series Service Door and E-Series Vision perforated rolling door both feature 4" curved slats in galvanized steel with 14-gauge roll-formed guides.

The E-Series Grille-X is a torsion spring grille featuring a curtain design with a 6" or 9" straight pattern, solid 5/16" hot-dipped galvanized steel rods with vertical aluminum links, and 14-gauge roll-formed guides.

The E-Series Grille torsion spring grille offers a heavy-duty curtain design with a 6" brick pattern, solid 5/16" hot-dipped galvanized steel rods with vertical aluminum links and PVC tube spacers, and 14-gauge roll-formed guides. An optional 9" straight lattice pattern is available. www.alpinedoors.com ■

Clopay expands Gallery Steel line

In July, Clopay expanded its Gallery Steel residential garage door line, adding a 25-gauge long panel stamp design with an embossed woodgrain texture. The door has a 2" steel frame construction and is available either with 1-5/16" polystyrene insulation or without insulation.

The new 25-gauge long panel Gallery Steel door has the same paint color, glass, window, and decorative hardware options as the 24-gauge model and is available in widths up to 18'. Clopay's marketing materials, digital tools, and price pages have been updated with the new product information. www.clopaydoor.com ■

Miller Edge unveils MWave radar sensor

In July, Miller Edge launched the MWave, an intuitive radar sensor for doors. The MWave motion sensor is equipped with dual relays, which allows users to customize its capabilities, influencing pedestrian versus vehicular traffic and approaching versus cross traffic.

The MWave comes pre-configured for a wide range of applications and is ideal for fast-paced environments. It can be easily fine-tuned from the ground when paired with the optional remote control. With an IP67 rating, the MWave can withstand inclement weather and environmental variables such as rain, snow, dust, and debris. www.milleredge.com ■

Raynor enhances ThermoSeal pass doors

In June, Raynor announced that the company has expanded and enhanced its pass door offering on the ThermoSeal commercial product line. The new and improved pass doors are more functional and feature a more aesthetically appealing design.

Deltrex offers new vandal-resistant switch

In July, DeltrexUSA launched a vandal-resistant switch. The new #149 switch has a flush surface, which is ideal for applications where vandalism or tampering might be a problem. The switch features marine-type aluminum that is easy to clean and is built to withstand dust and rain. Color, lettering, and logo engraving are optional.

DoorBird launches Accessibility door communication module

In June, DoorBird launched the D2100E Accessibility, an integration module designed to help people with impaired hearing or vision to enter buildings using accessible door communication.

The D2100E simultaneously address two of the three senses — sight, hearing, and touch. The two-sense principle ensures that entrance areas are accessible and usable for people with sensory impairments.

The door station's "Accessibility" module offers three pictograms: Call, talk, and open door. The module also features a hearing loop that can wirelessly transmit the audio signal from the intercom to the visitor's hearing aid, a visual display with induction loop, and an optional Braille feature that can be added to the IP-based door intercoms. These features reduce the sensory barrier for people with visual impairments.

The new module is integrated into DoorBird intercom systems and is ideal for educational institutions, hospitals, and retirement homes. Existing IP video door stations of the D21x series can be retrofitted with the D2100E Accessibility integration module. www.doorbird.com ■

CornellCookson adds SafetyGard UL325 light curtain

In August, CornellCookson introduced the SafetyGard UL325, a new and improved UL325-approved light curtain that can be used on service, insulated, fire, and counter doors and grilles. It can also be retrofit to an existing closure.

The SafetyGard provides non-contact primary entrapment device protection, enabling the door to stop for an obstruction without requiring contact with the object impacting closure. Its sleek design eliminates the visibility of the sensing edge in the opening, and the extruded mounting channel easily attaches to the guide design for easy installation. The curtain is available in 3' and 6' options.

Midland unveils new Weathered Oak woodgrain option

In July, Midland Garage Door added Weathered Oak to its woodgrain color options. Available in ThermoGuard and TS-138, Weathered Oak features a gray directional oak woodtone with a pebble grain finish that is ideal for residential applications. The new color is offered in six different panel designs and is priced the same as their other woodgrain colors.

Guardian enhances remote controls

In August, Guardian announced its ClearCom remote controls are available in a new design. The expanded transmitter family now includes one-button (model number D1B), two-button (D2B), and three-button (D3B) versions.

ClearCom remotes feature a code burst transmitted over a dual frequency of 303MHz and 390MHz. The improved design will provide the same consistent code burst regardless of how the user presses the button.

All Guardian remote controls are FCC-approved as well as backward and forward compatible with any Guardian 303MHz single frequency or 303MHz/390MHz dual frequency agile receiver. They are also compatible with any version of HomeLink. Visor clip and battery are included. www.adhguardianusa.com ■

Raynor adds Smart Home Accessories products

In May, Raynor announced the addition of smart locks to their Smart Home Accessories line. The company now offers a full range of products designed to enhance the safety and security of any home or garage. New products include smart cameras that easily mount to existing openers and smart door locks for a main entrance. www.raynor.com ■

Clopay expands insulated glass window options

In July, Clopay added 19.5" x 12" insulated glass windows as a standard option for its Models 3154 and 3155 Energy Series commercial doors up to 14'10" wide. The 1-3/8" polystyrene insulated steel doors are a low-maintenance option for use on warehouses, loading docks, and industrial or agricultural facilities.

The three-layer overhead sectional doors are available in a raised panel or flush design with an embossed woodgrain texture and offered in seven standard paint color options: White, Almond, Sandtone, Bronze, Chocolate, Hunter Green, and Gray. Custom colors are available through Clopay's Color Blast paint finish program. www.clopaydoor.com ■

TNR launches new HD SERIES rubber door line

In August, TNR unveiled its new HD SERIES high-performance industrial rubber door product line. The HD SERIES offers four key design features, easy installation, less maintenance, enhanced safety, and greater reliability.

New features include galvanized mounting angles that are reinforced, lightweight, and easy to install, NEWGEN guides with a light curtain for added safety, an aluminum pivoting bottom bar for improved wind resistance, and an updated direct drive system supported by the Hörmann Service Support mobile app.

With the launch of the new HD SERIES, 11 existing models have been rolled into six distinctive new door models. The new line also features a limited lifetime warranty, animated product installation videos, and installation manuals. Production is scheduled to begin November 1, 2021.
