## Common Jamb Construction for Rolling Counter Fire Doors: Masonry Construction - Bolted Guides

### Introduction:

Rolling counter fire doors are tested for compliance with UL 10B and NFPA 252. When tested, these doors are mounted on frames with jambs intended to replicate field construction. The test frame is held on the face of the test furnace for a specified period of time. The guides must remain fastened to the jambs and no “through gaps” may occur in the door assembly during the test. This DASMA Technical Data Sheet includes a representation of jamb construction and guide attachment details. Guide configurations and approved jamb construction will vary with individual fire door manufacturer's listings. Consult with individual manufacturers for specific guide details and their approved jamb constructions.

### Objectives:

The objectives of preparing the set of standard details enclosed areas follows:

1. To show how counter fire door guide assemblies are located on the jamb for face of wall mounting and between jamb mounting.
2. To provide recommendations for rebar locations in jambs.
3. To help architects, engineers and others involved with building specifications understand the relationship between the rolling counter fire door guides and the jamb/wall design.
4. To have the attached details included in applicable reference documents used by architects, engineers, specifiers and code officials

See the following pages for a list of standard jamb construction details.

---

**Note: Technical Data Sheets are information tools only and should not be used as substitutes for instructions from individual manufacturers. Always consult with individual manufacturers for specific recommendations for their products and check the applicable local regulations.**

This Technical Data Sheet was prepared by the members of DASMA's Rolling Door Division Technical Committee. DASMA is a trade association comprising manufacturers of rolling doors, fire doors, grilles, counter shutters, sheet doors, and related products; upward-acting residential and commercial garage doors; operating devices for garage doors and gates, sensing devices, and electronic remote controls for garage doors and gate operators; as well as companies that manufacture or supply either raw materials or significant components used in the manufacture and installation of the Active Members' products.

## DASMA Recommended

### Standard Jamb Construction:

## Rolling Counter Fire Doors on Masonry Walls

### Bolted Guides

#### General Notes:

1. Existing and new wall construction covered
2. Details are for general information only
3. Details are based on UL Classified and FM Approved Products
4. Consult a structural engineer for actual wall construction
5. Details are attachments to TDS-263

---

Notes:

1. For guides mounted to a steel angle, this angle must be embedded, or secured to the masonry wall. Angle must be designed to have an expansion gap equal to 1/8" for each foot of opening height in order to be suitable for welding guide angle to jamb.
2. For guides mounted to steel, when this steel stops at the header, metal shims must be inserted between the guide wall angle and the wall above the opening.

### Notes:

1. For guides mounted to a steel channel, this channel must be embedded, or secured to the masonry wall. Channel must be designed to have an expansion gap equal to 1/8" for each foot of opening height in order to be suitable for welding guide angle to jamb.
2. For guides mounted to steel, when this steel stops at the header, metal shims must be inserted between the guide wall angle and the wall above the opening.
